

for builders and planners:

- Technical implementation of the architectural specifications and material combinations under the consideration of the physical and structural framework conditions
- Construction-analysis in terms of thermal and acoustic insulation, artificial and natural light, air conditioning and energy balance
- Rehabilitation and adoption of counter and double sash windows, Stick-unitized system and facade elements
- Development of SSG systems and point-supported glazing
- Design of sunscreen and facade cleaning systems

for manufacturers:

- Development of 3D-CAD strategies for design optimization
- Development of 3D-CAM strategies for the optimized production flow
- System Development and System Engineering
